Scope of Work:

This TFPA 638 Authority project proposal represents “Phase 2” of a larger project to restore a native plant community in a historically fire dependent pine ecosystem. Phase 1 was completed in 2016-2020 with a pine thinning to retain live crown (2016) and two brushing projects to decrease the hazel component within the project area (2017 and 2020).

Residual trees have responded favorably to the thinning, exhibiting an increased growth rate. Phase 2 will consist of a second thinning that must occur in spring of 2022 to allow for adequate broadcast fuels to an Rx burn to take place in fall 2022. Upon execution of this agreement, LLBO will draft a silviculture plan for the project area and CNF silviculturists will review and certify the silviculture plan. CNF timber staff will revise the stand timber marking, if necessary, and then administer the thinning as service work included in a nearby stewardship timber sale. The thinning portion of the project will thin pine from below and remove canopy shading from other species within the project to promote species and structural diversity. Thinning will be completed during the frozen ground period of winter 2021/2022.

Following the second thinning, residual pine in the stand will average 10-12” DBH and the stands will have some adequate space for heat release to allow for a prescribed burn. This prescribed burn will coincide with LLBO’s approved Fire Restoration TFPA as well as the CNF’s Fire Dependent Ecosystem Restoration Categorical Exclusion. The Fire Dependent Ecosystem Restoration CE is currently undergoing NEPA analysis. Upon release of the NEPA decision document, LLBO and CNF fire staff will draft a prescribed burn plan for the project area. Safety procedures and risk management standards will be incorporated into prescribed burn plans and Rx fire implementation. Rx fire plans and projects will follow guidance and direction as outlined in the Interagency Prescribed Fire Planning and Implementation Procedures Guide (PMS 484) and associated documents.

The prescribed burn will be conducted, subject to availability of a burn window, cooperatively with LLBO and CNF staff in the fall of 2022. Following the prescribed burn, native seed will be dispersed over approximately half of the project acreage. The seeds require a winter dormant season to germinate; monitoring beginning the following spring will evaluate the results of the prescribed burn and subsequent seeding. To ascertain true performance, monitoring will continue for several years.

Phase 3 of this project, following adequate ground flora and favorable residual tree response (in pine and hardwoods) would consist of a third thinning to create larger openings and begin to plant fruiting shrubs (saplings) adequate for the site conditions within these openings. At this time, another brushing of the project site could occur. The estimated timeline for this phase would be 2027. Phase 3 is not itself part of this TFPA 638 Authority project but is contingent upon completion of all Phase 2 activities.

- 1.1 Authority. This agreement, (a Self-Determination Contract alternatively referred to as a contract) is executed under the authority of section 8703 of the 2018 Farm Bill, Public Law 115-334 (25 U.S.C. 3115b) pursuant to Title I of the Indian Self-Determination and Education Assistance Act (ISDEAA) (25 U.S.C. 450 et seq.; codified at 25 U.S.C. 5301, et seq.)
